(2) Uit elkeen van die houers wat vir ondersoek onttrek is moet 'n monster onttrek word wat bestaan uit die hele inhoud van die houer.

(3) *Afwykende monsters.* Indien 'n inspekteur tydens die onttrekking van die ewekansige monster of tydens die ondersoek merk dat van die houers wat uit enige gedeelte van die palet, trokvrug of besending afkomstig is, perskes of kaalperskes bevat wat ooglopend swakker voorkom of verskil van die inhoud van houers wat die res van die palet, trokvrug of besending verteenwoordig, moet hy die ondersoekresultaat baseer slegs op die houers afkomstig van die afwykende gedeelte van die palet, trokvrug of besending en verdere monsters benodig vir ondersoek moet uit hierdie afwykende gedeelte onttrek word.

Toets vir ryphheid van perskes:

19. (1) *Te groen.* Ten einde te bepaal of 'n besending te groen is, moet die 10 onrypste perskes uit elke monster, ooreenkomsdig regulasie 18 (2) onttrek, uitgesoek word. 'n Dun lagie skil moet van twee teenoorgestelde kante van elke perske op so 'n wyse verwijder word dat die naat van die vrug vermy word. Die druk van die vlees van die perske moet bepaal word, deur op die plek waar die skil verwijder is, 'n drukmeter met 'n suier van 11,1 mm in deursnee aan te wend. Die lesing ten opsigte van elke kant van elke perske moet afsonderlik genoteer word en hierna moet die gemiddeld van al die druklesings wat aldus van al die perskes in die betrokke monster verkry is, genoteer word. Hierdie gemiddelde is van toepassing op Bestemming A oppervlakvervoer. Sodaanige gemiddeld van al die druklesings word geag verteenwoordigend te wees van die bepaalde besending. Die perskes word as ryp genoeg geag as die gemiddeld van die druktoetslesings nie die voorgeskrewe gemiddelde druk oorskry nie. In die geval van Bestemming A lugvervoer en Bestemming B moet die individuele vrugte aan die voorgeskrewe maksimum ryphedsvereistes voldoen.

(2) *Orryp.* Ten einde te bepaal of 'n besending bestem vir Bestemming A oppervlakvervoer, orryp is, moet die hele inhoud van al die houers in die monster ooreenkomsdig regulasie 18 (2) onttrek, ondersoek word en bepaal word of sodanige perskes onderhewig is aan glipskil.

Toets vir ryphheid van kaalperskes:

20. (1) *Te groen.* Ten einde te bepaal of 'n besending te groen is, moet die vyf onrypste kaalperskes uit elke monster ooreenkomsdig regulasie 18 (2) onttrek, uitgesoek word. 'n Dun lagie skil moet op die laagste punt van die naat van die kaalperske verwijder word. Die druk van die vlees van die kaalperske moet bepaal word deur op die plek waar die skil verwijder is, 'n drukmeter met 'n suier van 11,1 mm in deursnee, aan te wend. In die geval van Bestemming A, oppervlakvervoer word die gemiddelde van al die druklesings wat aldus van al die kaalperskes in die betrokke monster verkry is, geag verteenwoordigend te wees van die bepaalde besending of telling. Die kaalperskes word as ryp genoeg geag as die gemiddeld van die druklesings nie die voorgeskrewe gemiddelde druk oorskry nie. In die geval van Bestemming A lugvervoer en Bestemming B, moet die individuele vrugte aan die voorgeskrewe maksimum ryphedsvereistes voldoen.

(2) *Orryp.* Ten einde te bepaal of 'n besending bestem vir uitvoer na Bestemming A deur middel van oppervlakvervoer, orryp is, moet die inhoud van al die houers in die monster ooreenkomsdig regulasie 18 (2) onttrek, ondersoek word en bepaal word of sodanige kaalperskes onderhewig is aan glipskil.

PART VII

INSPECTION METHODS

Sampling:

18. (1) An inspector shall abstract at random for inspection purposes a number of containers and shall satisfy himself that the containers so abstracted are representative of the consignment concerned.

(2) From each container abstracted for inspection a sample shall be abstracted which consist of the whole contents of the container.

(3) *Deviating samples.*—If an inspector should notice during the process of abstracting the random sample or during the inspection, that some of the containers derived from any part of the pallet, truck load or consignment contain peaches or nectarines which are noticeably inferior to or differ from the contents of containers which represent the remainder of the pallet, truck load or consignment, he shall base the inspection result only on the containers derived from the deviating portion of the pallet, truck load or consignment and further samples required for inspection shall be abstracted from this deviating portion.

Test for maturity of peaches:

19. (1) *Too immature.*—In order to determine whether a consignment is too immature, 10 of the most immature peaches, from each sample abstracted in accordance with regulation 18 (2) shall be selected. A thin slice of peel shall be removed from two opposite sides of each peach in such a manner that the suture of the fruit is avoided. The pressure of the flesh of the peach shall be determined at the spot from where the peel was removed by applying a pressure tester fitted with a plunger of 11,1 mm in diameter. The readings in respect of each side of each peach shall be noted separately and the average of all the pressure readings thus obtained from all the peaches concerned in the sample shall be noted. This average is applicable to Destination A surface transport. Such average of all the pressure readings shall be deemed to be representative of the consignment concerned. The peaches shall be deemed to be sufficiently mature if the average of the pressure test readings does not exceed the prescribed average pressure. In the case of Destination A air transport and Destination B, the individual fruit shall comply with the prescribed requirements.

(2) *Over mature.*—In order to determine whether a consignment intended for Destination A surface transport, is over mature, the contents of all the containers in the sample abstracted in accordance with regulation 18 (2) shall be inspected and determined whether such peaches are subject to slip-skin.

Test for maturity of nectarines:

20. (1) *Too immature.*—In order to determine whether a consignment is too immature, five of the most immature nectarines from each sample abstracted in accordance with regulation 18 (2), shall be selected. A thin slice of peel shall be removed from the lowest point of the suture of the nectarine. The pressure of the flesh of the nectarine shall be determined by applying a pressure tester fitted with a plunger of 11,1 mm in diameter, at the spot where the peel was removed. In the case of Destination A surface transport, the average of all the pressure readings thus obtained from all the nectarines concerned in the sample, shall be deemed representative of the specific consignment. The nectarines shall be deemed to be sufficiently mature if the average pressure reading does not exceed the prescribed average pressure. In the case of Destination A air transport and Destination B, the individual fruit shall comply with the minimum and maximum maturity requirements as prescribed.

(2) *Over mature.*—In order to determine whether a consignment intended for export to Destination A by means of surface transport, is over mature, the contents of all the containers in the sample abstracted in accordance with regulation 18 (2) shall be inspected and determined whether such nectarines are subject to slip-skin.
